

3. Create a simple cloud software application for flight reservation using cloud service provider to demonstrate.

Experiment - 2

Aim: To create a simple cloud software application for flight reservation using cloud service provider to demonstrate.

Procedure:

1. Visit www.zoho.com.
2. Login to your account.
3. It shows a wide range of application.
4. Select creator and create an application
5. Add fields to the form such as Name, contact, information, departure city, arrival city, departure date, arrival date.
6. Create a new page in the application and name it search flights. This page will allow users to search for available flights based on the information they entered in the reservation form.
7. Create a new form and name it booking. This form will be used to collect additional information from user such as payment details and will allow them to confirm reservation.
8. Now we can see the booking requirements in the flight reservation system.
